

**FOR IMMEDIATE PRESS RELEASE:
Wilwood Big Brakes for 1965-82 Corvette**

Camarillo, CA June 3, 2010

Wilwood [SL6R Big Brake kits](#) are now available for customized applications with wheel and suspension upgrades on the 1965-82 models years of the C2 and C3 generation Corvettes. The kits feature Wilwood's forged billet SL6R Superlite six piston calipers for the front, and the matching four piston SL4R calipers for the rear. Wilwood signature forged aluminum hats can mount either a 13" or 14" rotor over the OE front hub. A special steel rear hat mounts the rear rotor over the OE axle and retains full use of the OE parking brake assembly. Kits can be configured with SRP drilled and slotted rotors for performance street applications, or competition style GT rotors for the track. BP-10 compound Smart Pads provide quick response and higher fade resistance without the dust and noise of a race compound pad. These true "bolt-on" kits are also fully compatible with the OE master cylinder output capacity.
